

Please join us for a presentation by ECCCC on proposed amendments to the Wastewater Systems Effluent Regulations

ECCC is proposing to allow eligible communities another opportunity to apply for a transitional authorization to the end of 2030 or 2040. ECCCC is also proposing to create new temporary bypass authorizations to include planned releases of wastewater from sewer systems to improve transparency and reduce impacts on the environment.

The presentation will provide a detailed overview of the regulatory proposal, and ECCCC is interested in feedback, perspectives and questions from the session attendees. All comments received will be considered when drafting the proposed regulations.
