Course Objective / Description

The objective of this course is to provide participants with training in advanced water treatment plant processes. The course material will provide a cursory review of conventional water treatment. This will be followed by a description and explanation of new and emerging water treatment technologies including advanced oxidation processes (AOPs) such as ozonation, hydrogen peroxide and ultraviolet radiation. Granular activated carbon filtration and the four methods of membrane filtration: MF, UF, NF and RO will also be described along with their purpose, operation and effectiveness.

What will be covered:

- Emerging water quality issues
- Conventional water treatment processes
- Advanced water treatment processes
- Schematic diagram of advanced water treatment plant
- AOPs: ozonation, ultraviolet radiation and hydrogen peroxide
- AOP health and safety concerns and recommended PPE
- Granular activated carbon filtration
- Membrane filtration: MF, UF, NF, RO
- Lead residues corrosion control
